

CEJ's four simple saving tips

for a lower heating bill

- Keep a temperature of 19-20 degrees in the apartment.
- Be careful not to lower the temperature too much. The recommendation is that you do not have a lower temperature in the apartment than 17 degrees. If the temperature falls below 17 degrees, the risk of mold on walls and windows, etc. increases.
- Check your radiator. If the couch is placed in front of the radiator, or covered in a blanket, you reduce the radiator's effect. Therefore, keep a good distance from radiators so that heat can circulate freely in the room.
- Use your curtains. They insulate too cold air and drafts from windows.

In addition, remember that the old well-known saving tips still work, so save on the long baths and turn off the lights when you leave a room.
